Agency: **PR SOUND, MILANO**

Warsaw, 1st March 2008 – MedixSysteme, company leader in production of medical device, presents U.lift®, a new medical application based on ultrasounds (HIFU) for a non invasive treatment of the physiological disorder of the hypoderm.

U.lift®, unique and patented, proposed a real solution to treat cellulite not based on traditional superficial massage, injections or surgical trauma. U.lift®, is operated through the Ultracontour® platform.

Cellulite, in medical terms is described as a local sclerotic fibrosis oedema, to describe a subcutaneous tissue function altered. The skin is literally suspended from subcutaneous connective tissue and if the skin contains too much water, it is heavier.

Cellulite is characterized by extrusion of fat cells into the outer skin. This is caused by an increased concentration of damaged proteins, with high water –attracting properties. This leads to a rise in the amount of water retained in the skin.

There are several causes of cellulite such as consumption of too much proteinaceous prepared foods, occasionally consuming too much salt or spices will increase the temporary severity of disorder with additional water retention, an impaired hormone metabolism through the use of hormonal contraceptives, sedentarity, thigh clothes and shoes...etc

Cellulite is not caused by overweight; most slim women have cellulite too, about 90%.

U.lift®, is based on a multi-therapy protocol, using only ultrasounds focalised on fat cells are clustered in sacs, arranged in vertical columns. Only by preventing extrusion of fat cells into the outer skin can you eliminate cellulite.

For the first time the combined solution of Medixsysteme includes in its protocol a fight of cellulite but also consider as well to remove some of the causes for a long time result.

Medixsysteme, strong of its experience on Lymph drainage, (through specific ultrasonic massage UMD) with combined U.lift solution accelerates the deportation of 'dirty' protein, and water from those tissues.

About MedixSysteme

Medixsysteme, company is one of the world's leading manufacturers of medical equipment based in France. The company

offers products, services and research in Medical aesthetic.

Innovative solutions in body contouring and skin rejuvenation results from a close dialog with patients and physicians across the world, and continuous investment in R&D. The company's goal is to improve non invasive patient care with limited downtime for patients.

The engineers- physicians relationship and interaction is a central process in the development of medical devices.

There are many perspectives from which to understand and describe it. The quality of the company - physician relationship is important to both parties. The better in terms of mutual respect, knowledge, trust, shared values and perspectives about pathology and origin, and time available, the better will be the amount and quality of information about the patient's pathology transferred in both directions, enhancing accuracy of diagnosis and increasing the patient satisfaction in results.
